

Sylax butterfly valves

DN 25 up to 350 mm

sylax

Technical Manual

Description

By concentrating the technologies and by integrating technical solutions of the highest levels, Socla fulfils its ambition :

- competitiveness of a standard range,
- reliability,
- comprehensive range thanks to a multiplicity of solutions.

Sylax butterfly valves

DN 25 up to 350 mm

- Multiple connections : centering lugs, tapped lugs.
- Vertical and horizontal operating position.
- High power transmission with robust grooved connection between the shaft and the disc.
- Easy maintenance by removing the circlips
- Interchangeable disc and liner.
- Complete recyclability of the butterfly valve
- Body in cast iron GJL1040, ductile iron GJS1030 , steel and stainless steel.
- Body epoxy coated 80µm colour blue RAL 5017 (a lot of other coatings on option, please ask our sales department)
- Wide choice of actuations.

SAFETY

- > Safety anti-ejection circlip keeps shaft in place and allows easy maintenance
- > Safety reinforced by a secondary watertightness.
- > Spline driven one piece shaft connected to floating disc : high reliability of tightness and torque transmission in the long term.

PROTECTION AND RELIABILITY

- > High power transmission with robust grooved connection between the shaft and the disc.
- > Complete protection of the shaft and valve body from fluids.
- > Reliability of movements with self-lubricating bearings.

TRACEABILITY

- > Identification and traceability ensured by riveted metal tag : see on leaf 13.

Except DN 200

Normalisation

DESIGN

According to EN 593 and marking according to EN 19

ISO TOP CONNECTION FOR ACTUATIONS :

According to EN ISO 5211

FACE TO FACE :

According to 558-1 series 20
ISO 5752 series 20
API 609 table 2

CONNECTING FLANGES (see on page 11)

According to EN1092-1 and EN1092-2
ASME/ANSI B16.5
BS10-d and BS10-e
JIS B2238 and JIS B2239

TESTS

According to EN12266-1

Resistance and tightness of the body : test P11(1,5 x allowable operating pressure)

Tightness of the seat : test P12 rate A (1,1 x allowable operating pressure)

According to EN12266-2

Anti-static design : test F21

EUROPEAN DIRECTIVES

Our butterfly valves are in accordance to the safety requirements of the following directives. :

• Directive 2014/68/UE : Equipments under pressure PED (Pressure Equipment Directive)

Applies to the design, manufacturing and the assessment of the conformity of pressure equipment, the maximum allowable pressure of which is 0.5 bar.

Pressure equipment for water supply, distribution, and disposal of water is excluded. Depending on the type of pressure equipment, maximum allowable temperature (PS), DN, physical nature of the fluid (liquid, gas or vapour) and the degree of danger of the fluid (group1/2)*, the directive classifies this same equipment into different categories (article 4.3, I, II, III, IV), required for the assessment of conformity with CE marking. The equipment defined in article 4.3 of the directive must not bear the CE marking.

Important notice : the indicated pressure for the different categories of fluids (L1/L2/G1/G2) is under no condition a guarantee of use. Therefore, it is essential to validate the use of products under given operating conditions. Socla is not responsible for alteration of the products to working conditions not previously specified by the customer.

Machinery Directive 2006/42/CE : Machinery Directive

In its Appendix I it sets a certain number of Essential Health and Safety Requirements which must be met. It applies to motorised butterfly valves, (with electric, pneumatic or hydraulic actuators). According to this Directive, these sets are "Partly Completed Machineries" designed for being integrated into a machine.

"Partly Completed Machinery" means an assembly which is almost machinery but which cannot in itself perform a specific application. A drive system is partly completed machinery. Partly completed machinery is only intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment, thereby forming machinery to which this Directive applies.

Pressure

DIRECTIVE 2014/68/UE EQUIPMENTS UNDER PRESSURE

Products manufactured in conformity with the requirements of the directive, according to pressure, DN and fluid (see on the precedent page).

			End of line	16	16	16				

ATTENTION

Gas G1 and G2 : The max. pressure is 6 bar when using cast iron 5.1301(EN-GJL-250).

NOTE : Butterfly valves of category II used as «end of line», please consult us.

PS : Maximum allowable pressure (in bar) according to Directive 2014/68/UE

PFA : Allowable operating pressure (in bar) for supply, distribution and disposal of water.

- Water distribution and supply with the main European approvals, water treatment, most of the fluids of general services.
- Industrial applications such as Metallurgical, mining, paper-making, shipbuilding, nuclear, environmental and mechanical, food industry (see our list of approvals).
- For special applications, especially for particularly difficult media, contact our technical back office team.
- For vacuum and frequencies above 1 cycle / min, the headline will be pasted.

Installation

General remarks

For safety reasons, the installation must take place under the supervision of authorised people taking account of local safety instructions and advice.

The handling of butterfly valves and their controls must be done by staff trained in all technical aspects of their operation.

Before installation the pipes must be depressurised and purged (empty of its fluid) in order to avoid any danger to the operator.

The pipe work must be correctly aligned so that no extra stress is exerted on the valve casing.

Check the compatibility of the connection flanges against the operating pressure : the PN number of the flanges must be greater or equal to the operating pressure.

The valve is a machined piece of equipment and must not be used to prise apart the flanges.

A mounting instruction specifying the installation characteristics and the commission of the Sylax 25-350 mm is available on our web site www.socla.com or on request by our sales department.

Installation conditions

It is recommended that the distances mentioned below be respected in order to prolong the life time of the valve.

Mounting the valve close to pipe work junctions places it in turbulent zones which increase its wear.

Functioning characteristics

Torque values

NOTE : One actuation minimum per month.

The butterfly valve is not the best product for regulating Nevertheless, the Sylax 25-350 mm butterfly valve can be used to regulate by an opening stage between 30° and 90°. A regulation in the opening stage lower than 30° is not advisable because of over speed, cavitation effect, which could damage prematurely the valve

PS in Bar	Maximum speed m/s	
	Liquid with density of 1000 kg/m ³ *	Gas (density of 1,293 kg/m ³ at 273 °K and 1 bara)*
Up to 6	2,5	25
6 < PS ≤ 10	3	30
10 < PS ≤ 16	4	35
PS > 16	5	40

Kv = volume of water in m³/h through a valve at a preset opening stage and under a head loss of 1 bar.

* : In case of physical properties of fluid, the butterfly valves are adapted to the specific weight of the fluid.

Connecting flanges

End of line mounting and downstream removing

The end of line mounting and the downstream removing, at ambient temperature, of the Sylax 25-350 mm butterfly valve is limited to the pressure mentioned on page 11 according to the PED directive 2014/68/UE.

These mountings are only possible on tapped lugs and lugs with unthreaded holes.

For wafer type bodies with 4 centering lugs, the end of line mounting can be done in the following conditions :

- ambient temperature
- For water or non dangerous liquids (L2)
- For butterfly valves PFA 16 bar between flanges
- For butterfly valves with ductile iron body
- For butterfly valves with liners in EPDM or high content nitrile
- Within a short period (such as maintenance, ...), 15 days maximum
- In pressure conditions (PFA or PS) such as : see table

DN	PFA or PS (bar)
32 to 150	10
200 to 300	8

Use nuts with reduced face-to-face dimensions between the flange to be dismantled and the centering lugs.

Use washers, wide ones if needed, in order to mount the nuts on the lugs.

The mounting and the removing must be done successively and in opposite way on each nut.

For the mounting, apply a reasonable torque on the nuts, in order not to damage the lugs, until metal-metal contact between flange and body.

For flanges with 8 rods, only 4 are used to maintain the valve in downstream removing ; the 8 rods must be re-mounted for a normal use between flanges .

In case of unexpected downstream removing, integrate and screw successively and in opposite way, between the lugs and the flange to be removed, the 4 nuts which hold the butterfly valve.

Type of flange

The Sylax 25-350 mm butterfly valve has been designed to be mounted on normalised standard flanges. Only standard flanges type 11, 21 and 34 according to EN 1092 are quite compatible.

For other types of flanges, refer to the table below.

Non appropriate connections will cancel our guarantee.

DN		Ø A0	Ø A1 mini	Ø A2 maxi	Ø B mini

*** WAFER TYPE BODY, LUGS WITH UNTHREADED HOLES AND ANNULAR TYPE BODY :**

Assembly by rods :Number of nuts and washer = 2 x Number of rods (above)

Assembly by bolts :Number of nuts = Number of screws (above) and number of washer = 2 x Number of nuts

*** LUG TYPE BODY :**

Assembly by screws :Number of screw per face (above) and number of washer is the same

*** DOUBLE FLANGE BODY :**

Assembly by rods :Number of nuts and washers= 2 x Number of rods (above)

Assembly by rods + central nut : Number of nuts = 2 x Number of rods (above)

Number of washers = 4 x Number of rods (above)

Number of thin nuts for central position = 1 x Number of rods (above)

**** ASME / ANSI B16.5 Class 150 : Standard version : metric threading; UNC threading : please consult us.**

For any other templates, please refer to the corresponding standards and use the formulas below.

Bolts and nuts

L1 = minimum length of rods

L2 = minimum length under head of screw

L3 = minimum length under head of screw

L4 = minimum screw thread length

a = width of the butterfly valve (face to face dimension)

b = thickness of the flange (customer)

c = thickness of washer + thickness of nut + exceeding length of the rod

e = Maximum implantation of screws

j = thickness of washer under head of screw

For wafer type and lugs with unthreaded holes ; assembly by rods :

$$L1 = a + 2(b+c)$$

For annular type ; assembly by rods :

$$L1 = a + 2(b+c)$$

Mounting in case of downstream pipework dismantling (on leaf 12).

Use nuts with reduced face-to-face dimensions between the butterfly valve and the downstream flange.

For annular type ; assembly by bolts :

$$L2 = a + 2b + c + j$$

For wafer type and lugs with unthreaded holes ; assembly by bolts :

$$L2 = a + 2b + c + j$$

Mounting in case of downstream pipework dismantling (on leaf 12).

Use nuts with reduced face-to-face dimensions between the butterfly valve and the downstream flange.

For lug type and double flange type DN350; screw assembly:

$$L3 \leq b + e + j$$

$$\text{with } L4 \geq L3 - (b + j)$$

Version lug type with unthreaded holes, (permanent downstream dismantling) assembly by bolts :

$$L2 = a/2 + b + c + j$$

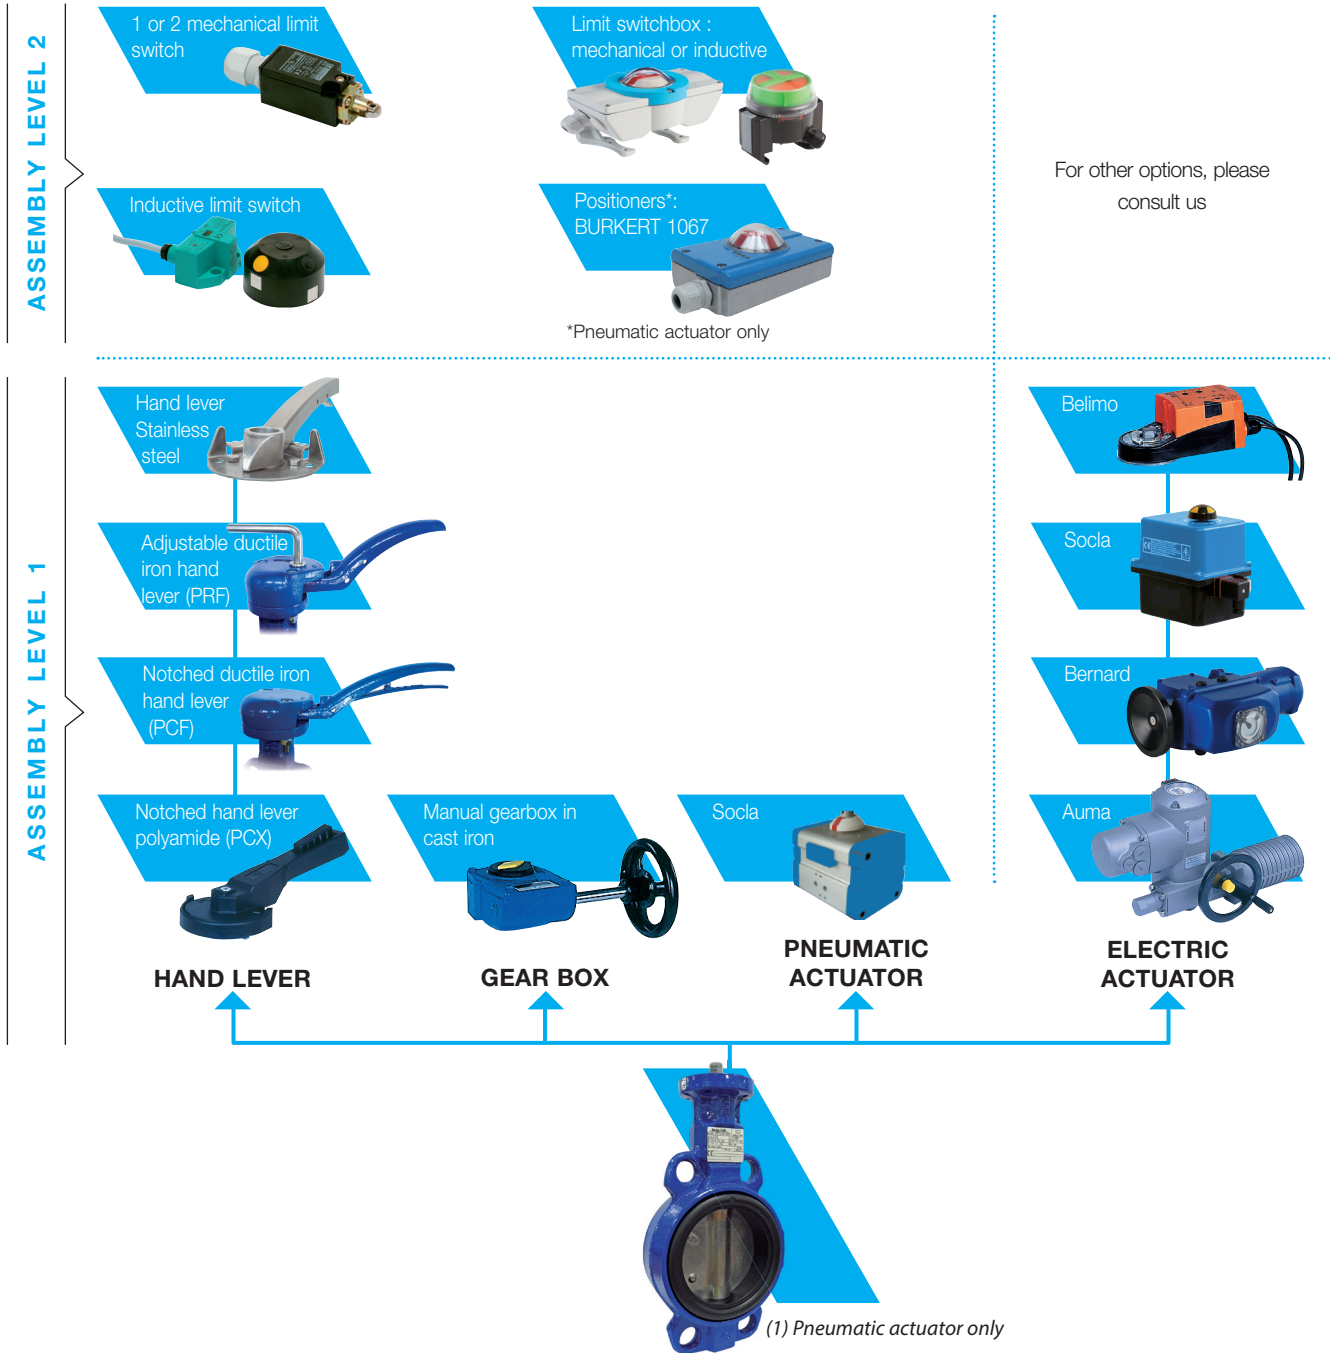

For double flange type assembly by rods:

$$L1 = a + 2(b+c)$$

Note: use low hexagonal nuts between flanges.

Actuations
